Rennes 2 University

Department of Psychology

Description succinte

The Department of Psychology deals with the different fields of psychology (social, cognitive, developmental, clinical, psychopathology, etc.), but also psychophysiology, neurophysiology, data analysis and methodological tools, such as statistics, all essential to the profession. A good level of math is therefore necessary. Psychology students often add courses from other disciplines (sociology, philosophy, law, etc.) in order to broaden potential career opportunities.

Career paths of the field are varied, from clinical psychology, developmental psychology, clinical psychopathology to human resources, social work, or education professions to name just a few. The Department of Psychology has two research units related to the field: LP3C (for Psychology, Cognition, Behavior and Communication) and the research unit in Psychopathology Research (New Symptoms and the Social Bond).
